GAMMA TUBULIN IS FOUND AT MICKETUBULE SEGMIZING CENTERS (MICK)
SUCH AS THE SPINDLE POLES OF THE FUNDERORE; SUBMERSTING THAT IT
IS INVOLVED IN THE MINUS-END NUCLEATION OF MICKOTUBULE ASSEMBLY.
-i- SIMILARITY: BELONGS TO THE TUBULIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Eukaryota, Funqi, Ascomycota, Pezizomycefina, Dothideomycetes,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Helicobacter pylori (Campylobacter pyloti).
Bacteria: ProLeobacteria: eps ion subdivision: Helicobacter droup:
Helicobacter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                30-MAY-2000 (Rel. 39, Last sequence update)

-i- FUNCTION: MAY FUNCTION AS AN ALAPTER OR COFACTOR TO FACILITATE COMMUNICATION HERMS SEQ DENCE-SECLET UNA HINDING BROTEINS AND THE GENERAL TRANSCRIPTIONAL MACHINERY. SEEMS TO BE REQUIRED FOR NORMAL CELL SURFACE ASSEMBLY. INVOLVED IN REPRESSION OF HEME-REGILARTH AND CATAROL THE SEPTEMS SED GENERAL FEBRESSION.
-i- FUNCTION: MEDIATOR OF GLUCIASE REPRESSION.
-i- SIMILARITY: CONTAINS 7 WD REPEATS (TRE ASP DOMAINS).

```
- - SUNCELLUIAR LOCATION: EXISTS BOTH AS A MEMBRANG-BOUND FORM AND AS SOLUBLE FORM IN SERUM AND IN THE EXTRACELLULAR MATRIX.
- - PTM. HEAVILY MODIFIED BY GLYCOSAMINGLYCAN GROUPS (GAG).
- - SIMILARITY: SOME REGIONS OF SIMILARITY TO ENDOGLIN.
- - SIMILARITY: CONTAINS 1 ZP DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sabs
